Josef POELT – on his personality and his footprints in the history of lichenology

1. Introduction	1
2. A brief glance at the history of lichenology	3
3. Josef POELT's life history	12
3.1. From birth to military service during the war	12
3.1.1. Origin and birth	12
3.1.2. Years at school.....	13
3.2. From war captivity to studies at university and to early employment	15
3.2.1. Years immediately after war captivity	15
3.2.2. Devotion to lichenology	16
3.2.3. University courses and employment at Botanical Garden and Staatssammlung	18
3.2.4. Colleagues and friends in early life.....	20
3.3. Family and children.....	22
3.4. Professional career	27
3.4.1. Ludwig Maximilians University in Munich.....	28
3.4.2. Free University in Berlin.....	31
3.4.3. Karl-Franzens-University in Graz	34
4. Josef POELT's tracks in the history of lichenology	39
4.1. His collections	39
4.1.1. POELT's lichen exsiccatae series	43
4.2. Results in research.....	44
4.2.1. Keys for European lichens	46
4.2.2. Lichens as parasites and cyanotrophy	49
4.2.3. Floristics	52
4.2.4. Taxonomy	54
4.2.5. Morphology and anatomy	62
4.2.6. Plant geography	65
4.2.7. Ecology and biology.....	67
4.3. POELT's new taxa.....	71
4.3.1. General classification and new families	71
4.3.2. New genera.....	72
4.3.3. New species.....	73
4.4. Josef POELT's young academics	75
5. Honours	75
6. Eponyms.....	76

7. Various.....	79
7.1. Services for scientific societies and journals.....	79
7.2. POELT author of obituaries	80
8. Outlook.....	81
9. Acknowledgements	82
10. References.....	82

Franz OBERWINKLER

How to understand cryptogams? The development of research methods and their impact on the knowledge of cryptogams – A tribute to Josef POELT

1. Introduction: what are cryptogams?.....	101
2. The beginning: collecting and classifying cryptogams	102
3. A first research boom: light microscopy and its impact on cryptogam research	105
4. The model group rust fungi.....	114
5. Electron microscopy for cell interior structures	126
6. Experimental approaches: cultures, biotechnology, sexuality and genetics.....	128
Biochemistry and physiology	130
Single-cell cryptogams and their biotechnological potential.....	132
7. The molecular revolution in biology	135
Gene based phylogenies.....	135
Biodiversity, barcoding and cryptotaxa.....	139
8. Cryptogamic fossils, ecological changes and challenges.....	142
Cryptogams over 500 million years	142
Interactive systems I: symbiotic cryptogams conquering terrestrial biomes and influential abiotic factors	145
Interactive systems II: extant cryptogams and their organismic partners.....	145
Interactive systems III: cryptogams and habitats	148
Cryptogamic fossils and the impact of cryptogams on ecosystems.....	150
9. Data-driven research and bioinformatics	150
10. Publication strategies and problems.....	152
11. Conclusions and outlook	154
12. Acknowledgement.....	157
13. References	157

Peter DÖBBELER

Hypocrealean hyperepiphyllous ascomycetes

1. Introduction	187
2. Materials and methods	189

3. Synoptic key to the species of hyperepiphyllous Hypocreales on the basis of perithecium colour and length, setae, number of cells per ascospore, size of ascospores, number of spores per ascus, haustoria, anamorphs, hosts, type of parasitism and microniches	190
4. Hypocreoid ascomycetes.....	192
5. The hypocrealean species in alphabetical order.....	193
1. <i>Anthonectria mammispora</i> DÖBBELER, Mycologia 102.....	196
2. <i>Bryocentria aequinoctialis</i> DÖBBELER, Karstenia 50.....	197
3. <i>Bryocentria gynophila</i> (DÖBBELER) DÖBBELER, comb. nov.....	198
4. <i>Bryocentria manubriata</i> DÖBBELER, Karstenia 50.....	199
5. <i>Bryocentria merospora</i> DÖBBELER	199
6. <i>Bryocentria perianthiicola</i> (DÖBBELER & J.CARRANZA) DÖBBELER, comb. nov.	200
7. <i>Bryocentria phaeocarpa</i> DÖBBELER, sp. nov.	201
<i>Bryonectria</i> DÖBBELER, Nova Hedwigia 66: 334 (1998).....	203
8. <i>Bryonectria calopoda</i> DÖBBELER, sp. nov.	204
9. <i>Bryonectria clandestina</i> DÖBBELER, sp. nov.....	206
10. <i>Bryonectria cyclopoda</i> DÖBBELER, sp. nov.	208
11. <i>Bryonectria diplopoda</i> DÖBBELER, sp. nov.	210
12. <i>Bryonectria egens</i> (CORNER) DÖBBELER, comb. nov.	212
13. <i>Bryonectria lobopoda</i> DÖBBELER, sp. nov.	214
14. <i>Bryonectria protonematis</i> DÖBBELER, Nova Hedwigia 92	215

Josef HAFELLNER

Focus on lichenicolous fungi: Diversity and taxonomy under the principle “one fungus – one name”

1. Introduction	227
1.1. Lichenicolous fungi – various attempts at a definition	227
1.1.1. Lichenicolous fungi s.str.....	227
1.1.2. Endolichenic fungi	228

1.1.3. Lichen epiphytes.....	228
2. Studying lichenicolous fungi – a flourishing field of mycology in recent decades	229
3. The diversity of lichenicolous fungi.....	230
3.1. Overall (global) diversity	230
3.2. Regional diversity	232
3.3. Local diversity.....	234
4. Taxonomy of lichenicolous fungi under the principle “one fungus – one name”	235
Example 1: <i>Lichenostigma</i> and <i>Lichenothelia</i> : 1 or 2 genera?.....	236
Example 2: Progress in the taxonomy of <i>Phoma</i> -like lichenicolous fungi	237
5. Conclusions	239
6. Acknowledgements	239

Reinhard BERNDT

**The Puccinosiraceae: Taxonomy of a polyphyletic family of the rust fungi
(Uredinales)**

1. Introduction	245
2. Overview of the Puccinosiraceae	248
2.1. Telia distinctly <i>Aecidium</i> -like, with peridium; teliospores one-celled, catenulate and separated by intercalary cells	248
2.2. Telia deep-seated, with well-developed or rudimentary peridium, or peridium absent; teliospores two-celled, <i>Puccinia</i> -like, catenulate and separated by intercalary cells.....	249
2.3. Telia deep-seated, without peridium; teliospores one-celled, catenulate, separated by strongly elongating intercalary cells, extruded as long threads; spore wall and wall of intercalary cells at least partly gelatinizing and of fuzzy appearance	250
2.4. Telia ampulliform, without peridium; teliospores one-celled, catenulate, separated by intercalary cells, extruded as short threads.....	251
2.5. Telia ampulliform, peridium lacking, with or without ostiolar paraphyses; teliospores one-celled, catenulate with or without(?) intercalary cells, extruded as long threads	251
2.6. Telia lentiform, peridium and other bounding structures absent; telio-spores one-celled, shortly catenulate, separated by intercalary cells or not.....	252
3. Discussion	254
4. Conclusions	263
5. References	264

Peter ZWETKO † and Paul BLANZ

Distinctiveness of aecia and aeciospores in rust fungi on conifers

1. Introduction	271
2. Comparison of aeciospores	273
2.1. Spores in aecidioid aecia	273
2.2. Spores in peridermioid aecia	275
2.3. Spores in caeomoid aecia	281
3. Conclusions	283
4. Acknowledgements	284
5. References	284
6. Appendix: Methods and description of specimens used for illustrations.....	285

Paul BLANZ and Peter ZWETKO †

Remarks on species concepts in European Florae of rust fungi

1. Introduction	289
2. Selected Florae of Rust Fungi of the 20 th century	290
The <i>Melampsora epitea</i> complex	294
The <i>Puccinia dioicae</i> complex	295
The <i>Puccinia recondita</i> complex	298
The <i>Coleosporium tussilaginis</i> complex	299
The <i>Puccinia pазschkei</i> complex	301
Perspective	305
3. Acknowledgements	305

Phylogeny of *Tremella* and cultivation of *T. fuciformis* in Taiwan

1. Introduction	331
2. Materials and methods	333
2.1. Morphology and phylogeny	333
2.1.1. Morphology observation	333
2.2. DNA sequencing	334
2.2.1. DNA preparation	334
2.2.2. Cyclic and autofluorescence sequencing	334
2.2.3. Neighbor Joining alignment	334
3. Cultivation of <i>Tremella fuciformis</i>	334
3.1. Mixed cultures	334
3.2. Temperature for primordia	335
3.3. Substrate and fructification.....	335
4. Results and discussion.....	335
4.1. Morphology and molecular phylogeny	335
4.1.1. Morphology	335
4.1.2. Description and illustrations of <i>Tremella fuciformis</i>	336
Macromorphology	336
Micromorphology	336
Remarks	339
4.2. Molecular phylogeny	340
4.2.1. AURANTIA group	342
4.2.2. FOLIACEA group	343
4.2.3. FUCIFORMIS group.....	344
4.2.4. INDECORATA group.....	345
4.2.5. MESENERICA group.....	346
4.3. Cultivation of <i>Tremella fuciformis</i>	347
4.3.1. Influence of mixed cultures on the growth of <i>Tremella fuciformis</i>	347
4.3.2. Influence of temperature on primordia.....	348
4.3.3. Fruiting body formation	350
5. References	351
